

“Conception confers life and makes that life one of a kind.”

Dr. Landrum Shettles

### National Geographic- In the Womb

“National Geographic produced a television program entitled *In the Womb* in 2005 that showed the development of the unborn child. In the introduction of the program they sum up the scientific knowledge of the beginning of life: “The two cells gradually and gracefully become one. This is the moment of conception when an individual’s unique set of DNA is created, a human signature that never existed before and will never be repeated.”

### Physicians and genetics tell us life begins at conception.

“...I have learned from my earliest medical education that human life begins at the time of conception.”

Dr. Alfred Bongiovanni, professor of Pediatrics and Obstetrics, University of Pennsylvania School of Medicine.

3

### The official Senate report reached this conclusion:

“Physicians, biologists, and other scientists agree that conception marks the beginning of the life of a human being—a being that is alive and is a member of the human species. There is overwhelming agreement on this point in countless medical, biological, and scientific writings,”

Life in the womb.

### Planned Parenthood once said:

Planned Parenthood Federation of America, the largest abortion provider in America published a pamphlet in 1963 entitled *Plan your Children for Health and Happiness*. The pamphlet stated, “An abortion requires an operation. It kills the life of a baby after it has begun.” Planned Parenthood now rejects that life begins at conception.

Even the definition of “fetus” according to Merriam-Webster Dictionary further explains the science behind when life begins:

Fetus / noun /: a human being or animal in the later stages of development before it is born. In Latin, “fetus” means “offspring.”
